

# Biostatistics Example Figures

University of Dallas

Inimary Toby, PhD

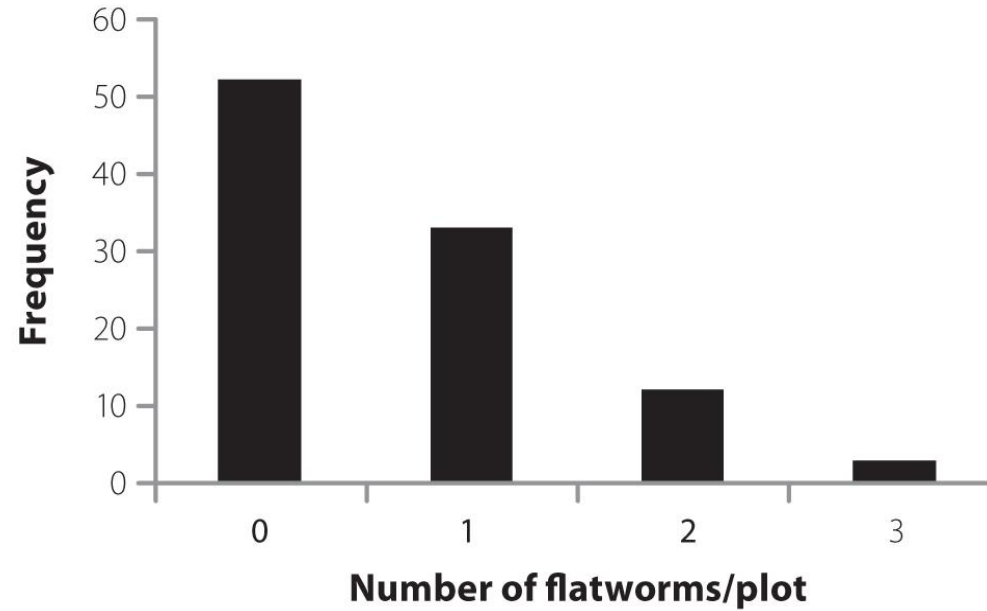

# Figure 1

Percentage of each food type in the diet of two hedgehogs. The size of the circle indicates the total amount of food in the stomach.

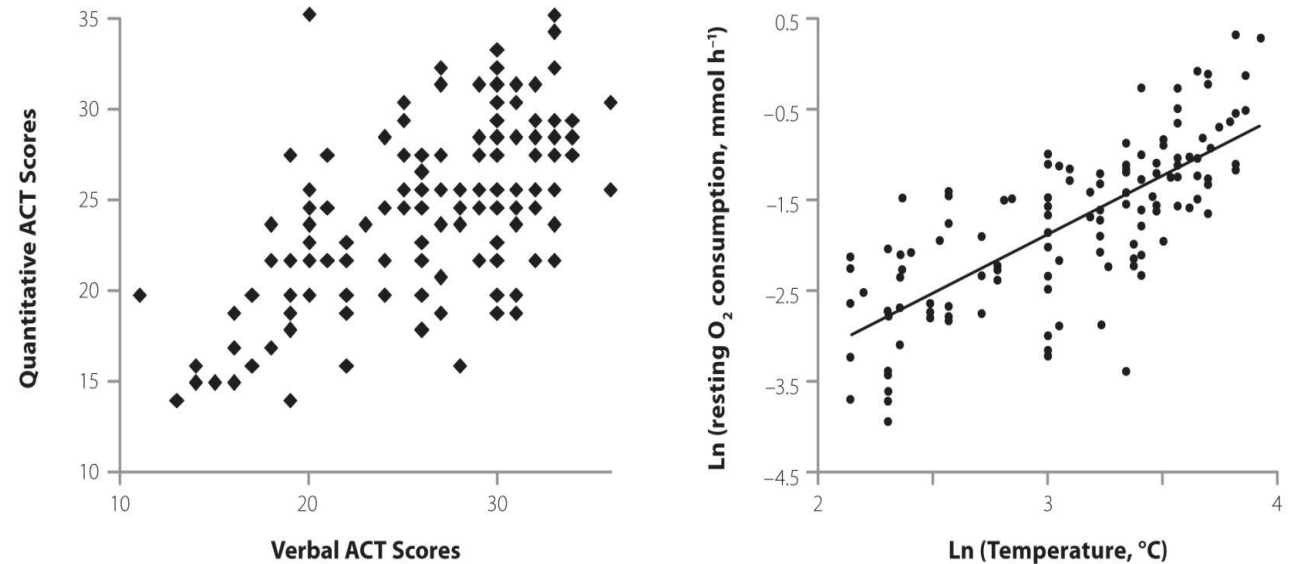

## Figure 2

The abundance of  
terrestrial flatworms in  
100 surveyed plots.

## Figure 3

- (A) The relationship between verbal ACT scores and quantitative ACT scores (imaginary data).
- (B) Log/log plot with fitted least squared regression line demonstrating the relationship between resting metabolic rate and temperature in teleost fish.
- Data from Clarke and Johnston, 1999. *Journal of Animal Ecology* 68:897.

## Figure 4

- Example of a time-series graph. Air temperatures from 2011 from Springfield, Missouri (daily average and daily maximum). Data from the National Weather Service, graph prepared by K. Reynolds.
